Deoxynucleotide (dNTP) Solution Mix

Reagents Supplied:
10 mM Deoxynucleotide Solution Mix 4 x 0.2 ml

Example of Use: For a reaction which calls for 200 µM of each dNTP, add 2 µl of this premixed deoxynucleotide solution per 100 µl reaction.

Diluent Compatibility: Can be diluted using sterile distilled water, preferably Milli-Q® water or can be diluted using sterile TE [10 mM Tris-Cl, 1 mM EDTA (pH 7.5)].

Quality Controls
The purity of each deoxynucleotide is ≥ 99% as determined by HPLC analysis.

0.5 kb, 2 kb and 5 kb Lambda PCR Assay – 25 cycles of PCR amplification of 1 ng Lambda DNA with 5 units of Taq DNA Polymerase in the presence of 200 µM Deoxynucleotide Solution Mix, 0.5 µM primers and 1X ThermoPol® Buffer results in the amplification of the specific 0.5 kb, 2 kb and 5 kb Lambda PCR Assay (λ DNA) products as determined by agarose gel electrophoresis.

Phosphatase Activity Assay (pNPP Colorimetric Assay) – A protein phosphatase buffer solution containing 2 mM Deoxynucleotide Solution Mix and 100 µM p-nitrophenol phosphate, incubated for 4 hours at 37°C, yields no detectable phosphatase activity as determined by spectrophotometric analysis of released p-nitrophenyl anion at 405 nm.

Non-specific Nuclease Assay – A 50 µl reaction in 1X NEBuffer 2 containing 1 µg of T3 DNA or HindIII digested Lambda DNA and a minimum of 10 µl of Deoxynucleotide Solution Mix incubated for 16 hours at 37°C results in a DNA pattern free of detectable nuclease degradation as determined by agarose gel electrophoresis.

For use with any DNA Polymerase from NEB.

N0447S
8 µmol each dNTP Lot: 0761408
Store at –20°C Exp: 8/16

Description: Deoxynucleotide (dNTP) Solution Mix is an equimolar solution of ultrapure dATP, dCTP, dGTP and dTTP.

Supplied in: Ultrapure water as a sodium salt at pH 7.5.

Concentration: Each deoxynucleotide is supplied at a concentration of 10 mM in an equimolar solution containing a total deoxynucleotide concentration of 40 mM.
