<td><strong>Functional Testing (Library Construction)</strong> - NEBNext® Immune Sequencing Kit (Mouse) is functionally validated using commercially available mouse spleen RNA. Libraries are constructed with the new and previous kit lots at the highest and lowest RNA input using both BCR and TCR primers. All libraries are sequenced on the same flowcell and compared with expected thresholds and between lots across a variety of metrics. Library assessment is based on metrics including library yield, read quality, distribution of reads per UMI, primer usage, assembled sequence length, and distribution of clonotypes.</td>
