| Functional Testing (Library Construction, FS DNA) | Pass |
| Each set of reagents is functionally validated and compared to the previous lot |  |
| through construction of libraries made from commercially available genomic DNA, |  |
| using the kit's minimum and maximum input requirements. A fragmentation time of 20 |  |
| minutes was used to generate an insert size of approximately 200 bp. The final |  |
| average library size is between 270 and 450 bp as determined by an Agilent |  |
| Bioanalyzer. Libraries made from the previous and current lots for both input DNA |  |
| amounts are sequenced together on the same Illumina flow cell and compared across |  |
| various metrics including library yield, fraction of reads aligning to the |  |
| reference, GC bias, and insert size. |  |
| * Individual Product Component Note |  |
| Standard Quality Control Tests are performed for each component included in NEBNext $®$ |  |
| Ultra'TM II FS DNA Module and meet the designated specifications. | Pass |

This product has been tested and shown to be in compliance with all specifications.
