New England Biolabs Certificate of Analysis

Product Name: Sphl
Catalog Number: R0182S
Concentration: 10,000 U/ml

Unit Definition: One unit is defined as the amount of enzyme required to digest 1 µg

of Lambda DNA in 1 hour at 37°C in a total reaction volume of 50 μl.

Packaging Lot Number: 10095468
Expiration Date: 01/2023
Storage Temperature: -20°C

Storage Conditions: 100 mM NaCl, 10 mM Tris-HCl (pH 7.4), 1 mM DTT, 0.1 mM EDTA, 50%

Glycerol, 200 μg/ml BSA

Specification Version: PS-R0182S/L v1.0

SphI Component List				
NEB Part Number	Component Description	Lot Number	Individual QC Result	
R0182SVIAL	SphI	10095469	Pass	
B7202SVIAL	NEBuffer™ 2.1	10090560	Pass	

Assay Name/Specification	Lot # 10095468
Protein Purity Assay (SDS-PAGE)	Pass
SphI is >95% pure as determined by SDS PAGE analysis using Coomassie Blue detection.	
Endonuclease Activity (Nicking)	Pass
A 50 µl reaction in NEBuffer 2.1 containing 1 µg of supercoiled PhiX174 DNA and a	
minimum of 30 Units of Sphl incubated for 4 hours at 37°C results in <20% conversion	
to the nicked form as determined by agarose gel electrophoresis.	
Blue-White Screening (Terminal Integrity)	Pass
A sample of pUC19 vector linearized with a 10-fold excess of SphI, religated and	
transformed into an E. coli strain expressing the LacZ beta fragment gene results in <1% white colonies.	
Non-Specific DNase Activity (16 hour)	Pass
A 50 µl reaction in NEBuffer 2.1 containing 1 µg of Lambda DNA and a minimum of 10	
Units of SphI incubated for 16 hours at 37°C results in a DNA pattern free of	
detectable nuclease degradation as determined by agarose gel electrophoresis. NOTE:	
although no nuclease degradation is detected under these conditions, extended	
incubations and/or high concentrations of this enzyme may result in star activity.	

R0182S / Lot: 10095468

Assay Name/Specification	Lot # 10095468
See the product FAQ for recommended reaction conditions for this enzyme.	
Ligation and Recutting (Terminal Integrity) After a 10-fold over-digestion of Lambda DNA with SphI, >95% of the DNA fragments can be ligated with T4 DNA ligase in 16 hours at 16°C. Of these ligated fragments, >95% can be recut with SphI.	Pass
Exonuclease Activity (Radioactivity Release) A 50 µl reaction in NEBuffer 2.1 containing 1 µg of a mixture of single and double-stranded [³H] E. coli DNA and a minimum of 100 units of Sphl incubated for 4 hours at 37°C releases <0.1% of the total radioactivity.	Pass

This product has been tested and shown to be in compliance with all specifications.
