# New England Biolabs <br> Product Specification 

| Product Name: | Ph.D. ${ }^{\text {TM-1 }} 12$ Phage Display Peptide Library |
| :---: | :---: |
| Catalog \#: | E8111L |
| Concentration: | $1 \times 10^{13} \mathrm{pfu} / \mathrm{ml}$ |
| Shelf Life: | 24 montbs |
| Storage Temp: | $-20^{\circ} \mathrm{C}$ |
| Storage Conditions: | 25 mM Tris-HCl, $75 \mathrm{mM} \mathrm{NaCl}, 50 \%$ Glycerol, (pH 7.5 @ $25^{\circ} \mathrm{C}$ ) |
| Specification Version: | PS-E8111L v2.0 |
| Effective Date: | 16 Apr 2019 |

Assay Name/Specification (minimum release criteria)
Absolute Phage Titer - Infection of a mid-log culture of E. coli ER2738 with Ph.D. ${ }^{\text {TM }} 12$ Phage Display Peptide Library followed by plating, yields $\geq 1 \times 10^{13} \mathrm{pfu} / \mathrm{ml}$.
Functional Testing (Panning) - A 100-fold representation of the Ph.D. ${ }^{\text {TM }} 12$ Phage Display Peptide Library containing approximately $10^{11} \mathrm{pfu}$ is diluted in $200 \mu \mathrm{TBS}$ and panned against $300 \mathrm{ng} \beta$-endorphin monoclonal antibody. The bound phage is affinity captured using magnetic beads and eluted with 1 ml of 0.2 M Glycine- $\mathrm{HCl}, \mathrm{pH} 2.2$. After three rounds of selection, $\geq 75 \%$ of sequences contain a motif related to the known epitope for the antibody.
Phage Contamination (Environmental) - A 1:100 dilution of an overnight culture of E. coli ER2738 was made in 20 ml LB, to which $10^{3}$ pfu of Ph.D. ${ }^{\text {TM }}-12$ Phage Display Peptide Library was added. The flask was incubated at $37^{\circ} \mathrm{C}$ on a rotating shaker for 5 hours. A 1 ml volume of culture was removed and centrifuged. A volume of culture supernatant equivalent to the initial PFU input was added to a second, 20 ml culture like the first. The final culture supernatant was plated on three LB/IPTG/Xgal plates and then titered. Fewer than $20 \%$ clear or white plaques were observed in a minimum of 100 total plaques counted on each plate.
Sequence Verification (DNA) - The Ph.D. TM-12 Phage Display Peptide Library was sequenced using 5'-
CCCATGTACCGTAACACTGAGTTTC-3' as a primer to confirm the correct form of the cloned insert on the displayed peptide, $\mathrm{X}_{12}$ -GGG.
