## HaeIII

R0108T/M
50,000 units/ml
One unit is defined as the amount of enzyme required to digest $1 \mu g$ of Lambda DNA in rCutSmart Buffer in 1 hour at $37^{\circ} \mathrm{C}$ in a total reaction volume of $50 \mu \mathrm{l}$.
24 months
$-20^{\circ} \mathrm{C}$
10 mM Tris-HCl, $50 \mathrm{mM} \mathrm{KCl}, 1 \mathrm{mM} \mathrm{DTT}$,0.1 mM EDTA, $50 \%$ Glycerol, $200 \mu \mathrm{~g} / \mathrm{ml}$ rAlbumin (pH $7.4 @ 25^{\circ} \mathrm{C}$ ) PS-R0108T/M v2.0

06 Feb 2023

Assay Name/Specification (minimum release criteria)
Exonuclease Activity (Radioactivity Release) - A $50 \mu 1$ reaction in rCutSmart ${ }^{\mathrm{TM}}$ Buffer containing $1 \mu \mathrm{~g}$ of a mixture of single and double-stranded $\left[{ }^{3} \mathrm{H}\right]$ E. coli DNA and a minimum of 100 units of HaeIII incubated for 4 hours at $37^{\circ} \mathrm{C}$ releases $<0.1 \%$ of the total radioactivity.

Functional Testing ( 15 minute Digest) - A $50 \mu 1$ reaction in rCutSmart ${ }^{T M}$ Buffer containing $1 \mu \mathrm{~g}$ of Lambda DNA and $1 \mu l$ of HaeIII incubated for 15 minutes at $37^{\circ} \mathrm{C}$ results in complete digestion as determined by agarose gel electrophoresis.
Ligation and Recutting (Terminal Integrity) - After a 20 -fold over-digestion of Lambda DNA with HaeIII, $>95 \%$ of the DNA fragments can be ligated with T4 DNA ligase in 16 hours at $16^{\circ} \mathrm{C}$. Of these ligated fragments, $>95 \%$ can be recut with HaeIII.

Non-Specific DNase Activity ( 16 Hour) - A $50 \mu$ reaction in rCutSmart ${ }^{\text {TM }}$ Buffer containing $1 \mu \mathrm{~g}$ of Lambda DNA and a minimum of 100 units of HaeIII incubated for 16 hours at $37^{\circ} \mathrm{C}$ results in a DNA pattern free of detectable nuclease degradation as determined by agarose gel electrophoresis.
Protein Purity Assay (SDS-PAGE) - HaeIII is $>95 \%$ pure as determined by SDS PAGE analysis using Coomassie Blue detection.
qPCR DNA Contamination (E. coli Genomic) - A minimum of 10 units of HaeIII is screened for the presence of E. coli genomic DNA using SYBR® Green qPCR with primers specific for the E. coli 16 S rRNA locus. Results are quantified using a standard curve generated from purified E. coli genomic DNA. The measured level of E. coli genomic DNA contamination is $\leq 1$ E. coli genome.
