| Functional Testing (Library Construction, DNA) | Pass |
| Each set of reagents is functionally validated and compared to a previous lot |  |
| through construction of libraries made from commercially available genomic DNA, |  |
| using the kit's minimum and maximum input requirements. Libraries made from previous |  |
| and current lots for both input DNA amounts are sequenced together on the same |  |
| Illumina® flow cell and compared across various metrics including library yield, |  |
| fraction of reads aligning to the reference, GC bias, and insert size. |  |
| * Individual Product Component Note <br> Standard Quality Control Tests are performed for each component included in NEBNext® <br> Ultra |  |
