## New England Biolabs Certificate of Analysis

Product Name: GpC Methyltransferase (M.CviPI)

Catalog Number: M0227L Concentration: 4,000 U/ml

Unit Definition: One unit is defined as the amount of enzyme required to protect 1 µg

Lambda DNA in 1 hour at 37°C in a total reaction volume of 10 μl

against cleavage by HaeIII restriction endonuclease.

Lot Number: 10032146
Expiration Date: 10/2020
Storage Temperature: -20°C

Storage Conditions: 15 mM Tris-HCl, 200 mM NaCl, 1 mM DTT, 0.1 mM EDTA, 50 % Glycerol,

200  $\mu$ g/ml BSA, (pH 7.4 @ 25°C)

Specification Version: PS-M0227S/L v1.0

| Assay Name/Specification                                                                                                                                                                                                                                                                                                                                                                                      | Lot # 10032146 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| Endonuclease Activity (Nicking) A 50 μl reaction in GC Reaction Buffer containing 1 μg of supercoiled PhiX174 DNA and a minimum of 40 units of GpC Methyltransferase (M.CviPI) incubated for 4 hours at 37°C results in <10% conversion to the nicked form as determined by agarose gel electrophoresis.                                                                                                      | Pass           |
| Exonuclease Activity (Radioactivity Release) A 50 µl reaction in GC Reaction Buffer containing 1 µg of a mixture of single and double-stranded [ ³H] E. coli DNA and a minimum of 40 units of GpC Methyltransferase (M.CviPI) incubated for 4 hours at 37°C releases <0.1% of the total radioactivity.                                                                                                        | Pass           |
| Functional Testing (Methyltransferase) A 20 μl reaction in GC Reaction Buffer supplemented with 160 μM SAM containing 1 μg of Lambda DNA and 1 unit of GpC Methyltransferase (M.CviPI) incubated for 1 hour at 37°C followed by heat inactivation results in ≥ 95% protection from digestion with 10 units of HaeIII in NEBuffer 2 incubated at 37°C for 1 hour as determined by agarose gel electrophoresis. | Pass           |

| Assay Name/Specification                                                                                                                                                                                                                                                                                              | Lot # 10032146 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| Non-Specific DNase Activity (16 Hour) A 50 µl reaction in GC Reaction Buffer containing 1 µg of Lambda DNA and a minimum of 40 units of GpC Methyltransferase (M.CviPI) incubated for 16 hours at 37°C results in a DNA pattern free of detectable nuclease degradation as determined by agarose gel electrophoresis. | Pass           |

This product has been tested and shown to be in compliance with all specifications.
