Functional Testing (Library Construction) - Each set of reagents is functionally validated through the construction of libraries made using commercially available DNA and the kit's input requirement. Libraries are sequenced on individual Oxford Nanopore[®] flow cells and their quality assessed across a number of metrics including library yield, sequence yield, pore occupancy, and read length.

* **Individual Product Component Note** - Standard Quality Control Tests are performed for each component included in NEBNext[®] Companion Module for Oxford Nanopore Technologies[®] Ligation Sequencing and meet the designated specifications.
